

StarFire™ 6000 Receiver Differential Correction Right Choice Tool

- Examples:**
- Tillage
 - Broad-acre chemical/fertilizer application (broadcast fertilizer spreading, spraying)
 - Price-sensitive customers

- Examples:**
- Multiple operations (planting, fertilizer sidedressing, post-emerge spraying, harvest) using the same guidance lines for one entire season
 - Strip till
 - Controlled traffic
 - Repeatable Section Control performance for an entire season
 - Customers in areas where RTK networks do not exist
 - Customers who are price-sensitive and don't invest in RTK infrastructure

- Examples:**
- AutoTrac in hills and areas with thick tree cover
 - Customers with fields that cover a large geographical area (would otherwise require multiple RTK base stations)
 - Customers with JDLink and John Deere Mobile RTK Signal coverage
 - Boundary mapping for long-term Section Control performance
 - Repeatable guidance lines over multiple years (drip tape irrigation, sugarcane, strip till, controlled traffic)

- Examples:**
- AutoTrac in flat terrain or areas without thick tree cover
 - iGrade (requires local RTK base station)
 - Boundary mapping for long-term Section Control performance
 - Repeatable guidance lines over multiple years (drip tape irrigation, sugarcane, strip till, controlled traffic)
